<comment type="function">
  <text evidence="4 5 6 9 11 12 17 18">Regulator of p53/TP53 stability and function. Inhibits MDM2-mediated degradation of p53/TP53 possibly by
  cooperating in part with TXNIP (PubMed:16849563, PubMed:23880345). May be involved transcriptional regulation. In vitro has intrinsic
  transactivation activity enhanced by EP300. May be a transcriptional activator required for the expression of glycolytic genes
  (PubMed:19919181, PubMed:9928932). Involved in regulation of cell cycle progression. Proposed to disrupt Rb-E2F binding leading to
  transcriptional activation of E2F proteins (PubMed:19640839). The cell cycle -regulating function may depend on its RUVBL1-mediated
  association with the R2TP complex (PubMed:26711270). May play a role in regulation of pre-mRNA splicing (PubMed:24722212). Participates
  together with DDX39A in mRNA nuclear export (PubMed:33941617).</text>
</comment>
<comment type="subunit">
  <text evidence="4 5 6 9 10 11 12">Interacts with TP53, MDM2, TXNIP (PubMed:16849563, PubMed:23880345). Interacts (phosphorylated) with PIH1D1.
  Interacts with RUVBL1 mediating the PIH1D1-independent association with the R2TP complex (PubMed:24656813, PubMed:26711270). Interacts with
  RBL1, RBL1 and RBL2; ECD competes with E2F1 for binding to hypophosphorylated RBL1 (PubMed:19640839). Interacts with EP300 (PubMed:19919181).
  Interacts with DDX39A (PubMed:33941617).</text>
